'The Patients' Guide to Infertility and IVF' and 'The Patients' Guide to DI'

Introduction

This booklet contains details of all clinics licensed by the HFEA for *In vitro* fertilisation (IVF) treatment including Intra Cytoplasmic Sperm Injection (ICSI), and contains important information to consider when choosing a clinic. The following pages should be read together with 'The Patients' Guide to Infertility and IVF'. This booklet shows the treatment data for the period 1 April 1998 to 31 March 1999.

Patients are advised to contact clinics directly for further information and their most recent results. The HFEA has given instructions to licensed clinics on what information to give patients about their treatment and live birth rates.

Choosing the clinic for you

Your decision on the best clinic for you should not be based solely on the live birth rate. You should also consider: the treatments offered; how comfortable you feel with the staff and the surroundings; what information and counselling is offered; the cost; and the location of the clinic. Take your time before you make a final decision and explore all the available options.

The live birth rate shown in the following data tables is that obtained by the clinic for all its treatments involving fresh, stimulated IVF (including ICSI) using patients' own eggs. It does not reflect an individual couple's specific chance of achieving a live birth. This can only properly be considered in consultation with your specialist.

FIG. 1 results of ART cycles

FIG. 2 IVF live birth rate by women's age (using her own eggs)

Understanding the live birth rate

This Guide uses three different stages of the treatment cycle to show the birth rate. This is calculated as the number of live birth events (twins and triplets count as one live birth event) divided by the number of:

- treatment cycles started
- egg collections
- embryo transfers

These may be explained as:

Treatment cycles started

The live birth rate per "treatment cycles started" includes all relevant treatments (fresh stimulated IVF/ICSI using patients' own eggs) given by a clinic. This gives the lowest live birth rate of the three stages as it includes cycles where patients failed to produce eggs or treatment cycles that were abandoned before eggs were recovered due to the risk of OHSS (see page 8 of 'The Patients' Guide to Infertility and IVF').

Egg collection

The live birth rate per egg collection reflects a number of factors. These include: ovarian stimulation; the number of eggs recovered; fertilisation rates; the quality of the embryology; and the embryo transfer technique.

Embryo transfer

The live birth rate per embryo transfer rate (regardless of the number of embryos replaced) reflects the quality of the embryos and the embryo transfer technique. The nearer this rate is to the live birth rate per egg collection the better. The data for embryo transfer is split into four categories: combined IVF and ICSI; IVF only; ICSI only and frozen embryo replacement. Data showing frozen embryo replacement is shown as IVF and ICSI combined and does not include cycles that were abandoned before embryo transfer because, for example, the embryos were not viable on thawing.

Information and advice about fertility treatment is available from your GP or consultant and from the doctor, nurses and counsellor at the licensed clinic. Each clinic produces its own patient information, describing the services available and explaining what is involved in treatment.

In addition, information is available from the following organisations.

Patient Organisations

CHILD

(The National Infertility Support Network)

Provides factsheets, a quarterly magazine, publications, medical advice and emotional support including helplines, local groups and local and national meetings. They can be contacted at:

Charter House, 43 St Leonards Road
Bexhill-on-Sea, East Sussex TN40 1JA

Tel: 01424 732361

Fax: 01424 731858

E-mail: office@email2.child.org.uk

<http://www.child.org.uk>

ISSUE (The National Fertility Association)

Members receive independent individual support and information. Members and non-members alike can telephone for help. Callers are answered personally 24 hours a day. Confidential telephone counselling by qualified counsellors is available to all every weekday evening.

They can be contacted at:

114 Lichfield Street, Walsall WS1 1SZ

Tel: 01922 722888

Fax: 01922 640070

E-mail: webmaster@issue.co.uk

<http://www.issue.co.uk>

DAISY NETWORK

Premature Menopause Support Group

Support group for girls and women who suffer early ovarian failure. Exchange information on IVF, HRT and on ways to have a family through egg donation, surrogacy or adoption. Provides informal telephone counselling by members and quarterly newsletter.

They can be contacted at:

P.O. Box 392, High Wycombe, Bucks, HP15 7SH

You can call Pip Morris on 01242 680 522 or

Monique Francis on 01628 473446 (evenings) or

0208 569 1234 ext 2648 Mon, Wed, or Friday (office hours)

DONOR CONCEPTION NETWORK

Provides contact and support for those who have children, or plan family creation, conceived using donated gametes through donor insemination (DI) and IVF with donor sperm or donated eggs.

They can be contacted at:

P O Box 265, Sheffield S3 7YX

Tel/Fax: 0208 245 4369

<http://www.dcnetwork.org>

MISCARRIAGE ASSOCIATION

Provides support and information on the subject of pregnancy loss.

They can be contacted at:

c/o Clayton Hospital, Northgate, Wakefield,
W. Yorks WF1 3JS

Tel: 01924 200799

Fax: 01924 298834

NATIONAL CHILDBIRTH TRUST (NCT)

Offers information and support in pregnancy, childbirth and early parenthood. They aim to give every parent the chance to make informed choices.

They can be contacted at:

Alexandra House, Oldham Terrace, London W3 6NH

Tel: 020 8992 8637

9.30-4.30 Monday to Friday

Fax: 020 8992 5929

NATIONAL ENDOMETRIOSIS SOCIETY

Provides a helpline, local groups and clubs, a newsletter and other publications, workshops and conferences.

They can be contacted at:

50 Westminster Palace Gardens,
Artillery Row, London SW1P 1RL

Tel: 020 7222 2776

Fax: 020 7222 2786

NATIONAL INFERTILITY AWARENESS CAMPAIGN (NIAC)

A lobbying organisation campaigning for NHS funding for all infertility treatment on an equal basis across the UK. Gives advice on the current situation with regard to NHS funding and on campaigning/lobbying activities. They can be contacted through the patient organisations CHILD and ISSUE.

TWINS & MULTIPLE BIRTHS ASSOCIATION (TAMBA)

Provides support for families with twins, triplets or more, and for professionals involved with their care. Network of local Twins Clubs, specialist support groups, publications and an information pack. They can be contacted at:

PO Box 30, Little Sutton, South Wirral L66 1TH
Confidential helpline: 01732 868000 open:
7pm-11pm weekdays, 10am-11pm weekends.

Other Organisations

BRITISH INFERTILITY COUNSELLING ASSOCIATION (BICA)

BICA aims to promote high quality, accessible counselling services for people with fertility problems. The Association offers information to patients who are seeking details of counsellors specialising in infertility. They can be contacted at:

69 Division Street, Sheffield S1 4GE
Information line: 01342 843880
<http://www.bica.net>

MULTIPLE BIRTHS FOUNDATION

Provides professional support and information about all aspects of multiple births. They can be contacted at:

4th Floor, Hamm House, Hammersmith Hospital,
Du Cane Road, London W12 0HS
Tel: 020 8383 3519
Fax: 020 8383 3041

PROGRESS EDUCATIONAL TRUST

Provides information on fertility and genetics, and promotes discussion on their ethical and legal implications. Publishes a news journal, 'Progress in

Reproduction'. They can be contacted at:

140 Gray's Inn Road,
London WC1X 8AX
Tel: 020 7278 7870
Fax: 020 7278 7862
E-mail: admin@progress.org.uk
<http://www.progress.org.uk>

How to Read the Data Tables

National data statistics are used below as an illustration. This data and individual clinic data covers the period 1 April 1998 - 31 March 1999.

Address and contact

This is the address and telephone number you should use to contact the clinic.

Non fee paying

This applies only to the actual treatment procedure and is typically NHS funded treatment.

Treatment cycles started (Fresh stimulated cycles using patients own eggs)

Of the 21,274 treatment cycles started by women below 38 years, 4,698 or 22.1% resulted in a live birth. (This includes IVF and ICSI).

Of the 27,230 treatment cycles started by all women, 5,304 or 19.5% resulted in a live birth. (This includes IVF and ICSI).

At egg collection (Fresh stimulated cycles using patients own eggs)

Of the 19,850 treatment cycles reaching egg collection in the below 38 category, 4,698 or 23.7% resulted in a live birth. (This includes IVF and ICSI).

Of the 25,171 treatment cycles reaching egg collection in the all ages category, 5,304 or 21.1% resulted in a live birth. (This includes IVF and ICSI).

At embryo transfer (Fresh stimulated cycles using patients own eggs)

Of the 18,333 treatment cycles reaching embryo transfer in the below 38 category, 4,698 or 25.6% resulted in a live birth. (This includes IVF and ICSI)

Of the 23,171 treatment cycles reaching embryo transfer in the all ages category, 5,304 or 22.9% resulted in a live birth. (This includes IVF and ICSI).

IVF only (Fresh stimulated cycles using patients own eggs - per embryo transfer)

Of the 10,436 treatment cycles reaching embryo transfer in the below 38 category, 2,674 or 25.6% resulted in a live birth. (IVF only).

Of the 13,523 treatment cycles reaching embryo transfer in the all ages category, 3,072 or 22.7% resulted in a live birth (IVF only).

Live birth rates

	below 38	all ages
Treatment cycles started (IVF & ICSI)	22.1% (4698/21274)	19.5% (5304/27230)
Egg collection	23.7% (4698/19850)	21.1% (5304/25171)
Embryo transfer	25.6% (4698/18333)	22.9% (5304/23171)
IVF only (per embryo transfer)	25.6% (2674/10436)	22.7% (3072/13523)
ICSI only (per embryo transfer)	25.6% (2024/7897)	23.1% (2232/9648)
Frozen embryo replacements (per embryo transfer)	14.3% (632/4406)	13.4% (733/5454)

ICSI only (Fresh stimulated cycles using patients own eggs - per embryo transfer)

Of the 7,897 treatment cycles reaching embryo transfer in the below 38 category, 2,024 or 25.6% resulted in a live birth (ICSI only).

Of the 9,648 treatment cycles reaching embryo transfer in the all ages category, 2,232 or 23.1% resulted in a live birth (ICSI only).

Licensed for

This is a list of licensed treatment services provided by the clinic.

Licensed for

In Vitro Fertilisation - Donor Insemination - Storage of Sperm - Storage of Embryos - In Vitro fertilisation with donor sperm

Patients

27,151 patients received IVF treatments (some patients will have had more than one treatment cycle).

Live birth rates

	below 38	all ages
Treatment cycles started (IVF & ICSI)	22.1% (4698/21274)	19.5% (5304/27230)

Below 38 and all ages

On average, older women have a reduced chance of having a live birth. To fairly represent clinics treating relatively large numbers of older women, two live birth rates per treatment cycle are given: one for all women and another for women below the age of 38.

Other results for all IVF treatments

Patients	27151
Singleton births	4711
Twin births	1640
Triplet births	169
Elective two embryo transfer cycles	7040 (48%)
Abandoned treatment cycles	4843 (14%)

Other results from all IVF treatments

4,711 single babies, 1,640 twins (3,280 babies) and 169 triplets (507 babies) were born from treatment. These figures include stillbirths and neonatal deaths.

Elective two embryo transfer cycles

This shows the number of treatment cycles where a choice was made to transfer two embryos instead of one or three. The calculation is based on those treatment cycles where more than four embryos were available for transfer.

Treatments with donated eggs or embryos

Cycles with donated eggs	1702
Cycles with donated embryos	299
Number of live births	411

Abandoned treatment cycles

4,843 or 14% of treatment cycles were abandoned before reaching the embryo transfer stage.

Treatments with donated eggs or embryos

There were 1,702 treatment cycles using donated eggs
299 treatment cycles used donated embryos,
411 live births resulted from the use of donated eggs or embryos.

Frozen embryo replacements

Of 4,406 treatment cycles using frozen embryos in the below 38 category, 632 or 14.3% resulted in a live birth (This includes IVF and ICSI).

Of 5,454 treatment cycles using frozen embryos in the all ages category, 733 or 13.4% resulted in a live birth. (This includes IVF and ICSI)

Live birth rates

	below 38	all ages
Treatment cycles started (IVF & ICSI)	22.1% (4698/21274)	19.5% (5304/27230)

Treatments with donated eggs or embryos

Cycles with donated eggs	29
Cycles with donated embryos	5
Number of live births	11

Abandoned cycle

In IVF where a treatment cycle is cancelled after commencing administration of drugs, but at any stage before embryo transfer.

Assisted hatching

The mechanical, chemical or laser breaching of the gelatinous coating of the egg.

Cervical mucus

The secretions surrounding the cervical canal. The amount and texture changes during ovulation to allow sperm penetration.

Counselling

All licensed clinics are required to offer patients counselling. Such counselling aims to enable the patient to understand the implications of treatment, to give emotional support and to help the patient cope with the consequences of treatment.

Cryopreservation

The storage of gametes or embryos by freezing at low temperatures.

Donor Insemination (DI)

The insemination of donor sperm into the vagina, the cervix or the womb itself.

Egg collection

Procedure by which eggs are collected from the woman's ovaries by using an ultrasound guided needle or by using a laparoscope (an instrument for looking into the abdomen) and a needle. Also known as egg retrieval.

Embryo

A fertilised egg up to eight weeks of development.

Embryo freezing

Embryos not required for treatment in a cycle can be frozen and stored for future use. Freezing is also known as cryopreservation.

Embryo transfer

Transfer of one or more embryos to the uterus.

Embryo storage

The storage of one or more frozen embryos for future use.

Endometriosis

A female condition in which endometrial cells, which normally line the uterus, implant around the outside of the uterus and/or ovaries, causing internal bleeding, pain and

reduced fertility.

Epididymis

Coiled tubing outside the testicles which store sperm.

Fallopian tube(s)

The tubes between the ovaries and the uterus. After release of the egg from one of the ovaries, the tube transports the egg to the uterus.

Fetus

The term used for an embryo after the eighth week of development until birth.

Follicle(s)

A small sac in the ovary in which the egg develops.

Gamete

The male sperm or the female egg.

Gamete Intra Fallopian Transfer (GIFT)

A procedure in which eggs are retrieved from the woman, mixed with sperm and immediately replaced in one or other of the woman's fallopian tubes so that they fertilise inside the body.

Gonadotrophins

Drugs used to stimulate the ovaries similar in composition to natural follicle stimulating hormone (FSH) produced by the pituitary gland

Hamster test (HEPT)

A test of the fertilising ability of human sperm by observing their penetration into the hamster egg.

HFEA

Human Fertilisation and Embryology Authority.

Intra Cytoplasmic Sperm Injection (ICSI)

A variation of IVF treatment where a single sperm is injected into the inner cellular structure of the egg.

Intrauterine Insemination

Insemination of sperm into the uterus of a woman.

In Vitro Fertilisation (IVF)

Eggs and sperm are collected and put together to achieve fertilisation (IVF) outside the body.

Live birth

The delivery of one or more babies.

Live birth rate

The number of live births achieved from every 100 treatment cycles commenced.

Menstrual cycle

A cycle of approximately one month in the female during which the egg is released from an ovary, the uterus is prepared to receive the fertilised egg and blood and tissue are lost via the vagina if a pregnancy does not occur.

Microsurgical Epididymal Sperm Aspiration (MESA)

Retrieving sperm directly from the epididymis.

Multiple birth

Birth of more than one baby from a pregnancy.

Multiple birth rate

This is the percentage of all births in which more than one baby was born.

Multiple pregnancy

This is the percentage of all pregnancies in which two or more fetal hearts are present.

Natural/Unstimulated cycle

No drugs were given to stimulate egg production.

Neonatal death

The death of a baby within 28 complete days of delivery.

Ovarian Hyperstimulation Syndrome (OHSS)

A serious complication following stimulation of the ovaries with gonadotrophin drugs.

Ovary

One of a pair of female reproductive organs which produce eggs and hormones.

Partial Zona Dissection (PZD)

A variation of IVF treatment in which a small hole is made in the outer membrane of the egg using a small glass needle, thereby easing the passage of sperm into the egg under their own motion.

Percutaneous Epididymal Sperm Aspiration (PESA)

Retrieving sperm directly from the coiled tubing outside the testicles that store sperm (epididymis) using a needle.

Preimplantation Genetic Diagnosis (PGD)

Techniques by which embryos fertilised *in vitro* are tested for specific genetic disorders (e.g. cystic fibrosis) or other characteristics such as sex before transfer to the uterus.

Pregnancy rate

The number of pregnancies achieved from every 100 treatment cycles commenced.

Spermatid

An immature sperm cell.

Stillbirth

The birth of a dead infant.

Stimulation drugs

Drugs used to stimulate a woman's ovaries to produce more eggs than usual in a monthly cycle; also known as superovulatory drugs.

Stimulated cycle

A treatment cycle in which stimulation drugs are used to produce more eggs than usual in the woman's monthly cycle.

Superovulation/stimulation

The stimulation of a woman's ovaries with drugs to produce more eggs than usual in a monthly cycle.

Testicular Sperm Extraction (TESE)

Retrieving sperm directly from the testis.

Testis

Testicle or male gonad.

Treatment cycle

- a) IVF with fresh embryos: a cycle begins with the administration of drugs for the purpose of superovulation or, if no drugs are used, with the attempt to collect eggs;
- b) IVF with frozen-thawed embryos: a cycle begins with the removal of the stored embryo in order to be thawed and then transferred;
- c) DI: a cycle begins when the first insemination with donor sperm takes place.

Unknown outcome

The outcome of a clinical pregnancy is unknown due to incomplete information being returned by a clinic to the HFEA.

Zona drilling (ZD)

Acid released to dissolve the gelatinous coating of the egg leaving a hole through which the sperm can enter.

The HFEA — who we are and what we do

The Human Fertilisation and Embryology Authority (HFEA) was set up in 1991 to licence and regulate clinics which provide:

- *in vitro* fertilisation (IVF) treatment
- donor insemination (DI) treatment
- gamete intra fallopian transfer (GIFT) where donated sperm or eggs are used in treatment
- storage of gametes or embryos.

The HFEA also licenses clinics that carry out research involving human embryos. These activities can only be carried out if the clinic obtains a licence from the HFEA. As well as licensing research and treatment clinics, the HFEA also:

- publishes a Code of Practice giving guidance to clinics on how they should carry out licensed activities;
- keeps a confidential register of information about donors, patients and treatments;
- gives advice and information to licensed clinics;
- gives information and advice to people seeking fertility treatment, to donors and the general public.

The HFEA exists to safeguard, protect and reassure patients, professionals and the public about licensed infertility treatments and human embryo research.

The HFEA inspects all licensed treatment centres annually, requiring and helping all centres to achieve, and adhere to, the high standards in our Code of Practice. The HFEA remains one of the few national statutory bodies of its kind in the world.
